About Wire Suspension...

- DobyGrip Max can exceed the traditional 60 deg inclusive angle which allows the installer to position the grip right up to the duct or suspension beam.
- There are 7 different grips in the DobyGrip family, with SWL from 10kg upto 500kg!
- DobyGrips have been independently tested or approved for used by Lloyds Register, TUV, APAVE, UL, and SMACNA.
- Wire suspension can be used to internally suspend any static load (up to 500kg with a single DobyGrip).
- Can cut down the installation time by up to 60% when compared with traditional suspension methods.
- When installing ducts or pipes, a good rule of thumb to ensure 60 deg inclusive angle is not exceeded is to ensure the distance from the top of the duct / pipe to the grip is larger than the diameter of the pipe.
