

Ductwork Components

Doby Zinc Coatings Factsheet

WHAT YOU NEED TO KNOW!

The importance of weight with a zinc coating.

- It cannot be stressed enough about the importance of correct weight galvanised coating.
- We always use coatings above the specified weight in DW 144 and currently only offer 275g/m² on our profiles.
- Whilst DW 144 states that 140g/m² can be used as long as it will meet the required installation conditions.
- Not all the ductwork profiles on sale nationally can boast this approach. You may not be getting what you think you are getting which will lead to a premature deterioration in product longevity!
