

# Specialised Engineering Services

## Special Purpose Machinery

- Full in-house production facility with over 50 years experience.
- Roll tool design, rollformed profiles and pressed components
- We are able to provide our customers with a unique tailor made service.
- Very high quality close tolerance part and tool manufacture.
- Press capacities up to 200 tonnes available.
- Quality Assurance Certifications BS EN ISO 9001 & BS EN ISO 14001.
- Division produces Customer specific Rollformed Profiles and Pressed Components.
- Design engineers, toolmakers and machinists are experts in their respective fields.

## Specialised Machining

Doby Verrolecs in-house expertise has been gained over many years, developing solutions to its own manufacturing

and material handling requirements has led to the expansion of its Engineering Services Division into the design and

manufacture of special purpose machinery.

The need to produce cost effective parts, high-precision, close tolerance parts for its customers makes it fully aware of the needs and requirement of any company wishing to develop its own equipment. From simple supply only material handling systems to full CNC controlled production lines the Engineering Services Division can offer the highest quality and cost effective solution.

Our experienced design & development team are able to take customers ideas and turn them into a reality, supported by engineers, toolmakers and machinists, all experts in their respective fields, makes a decisive contribution to the overall customer solution.

Utilising selected partners where necessary the Engineering Services Division are able to offer the complete package, taking customers ideas, developing the appropriate machinery to satisfy the demand, delivery to the customers premises for installation and commissioning. Full operator training and continued support until the Customers team are fully up to speed and able to take over full production.
